

TeachPad SEO Audit Report

Point-wise review of the current TeachPad website from an SEO perspective.

Audit date: 04 June 2026 | Scope: local Next.js site at localhost:3000, production domain assumed as <https://teachpad.in>.

Overall status	Good base is in place, but important technical SEO clean-up is still left before production indexing.
Strongest areas	Sitemap, robots.txt, metadataBase, OG/Twitter defaults, generator-page metadata, FAQ-style structured data, one H1 on sampled public pages, image alt text.
Biggest risks	Private pages are not noindexed, several public pages lack self-canonical tags, sitemap includes a redirecting URL, and lastmod changes on every request.

Already Done

- `sitemap.xml` exists and is served at `/sitemap.xml`.
- `robots.txt` exists and links to <https://teachpad.in/sitemap.xml>.
- `robots.txt` blocks `/admin/`, `/auth/`, `/dashboard/`, `/login`, `/reset-password`, and `/signup`.
- Global `metadataBase` is set to <https://teachpad.in>.
- Global Open Graph and Twitter image metadata exists.
- Main generator pages have unique titles, descriptions, canonical URLs, OG tags, Twitter tags, and structured data.
- Sampled public pages returned 200 status, except `/lesson-plan` which redirects to `/lesson-plan-generator`.
- Sampled public pages have one H1 each.
- Sampled rendered images had alt attributes present.

High Priority Changes Left

- Remove `/lesson-plan` from `sitemap.xml` because it returns 307 redirect. Keep only `/lesson-plan-generator` as the canonical sitemap URL.
- Add self-canonical URLs to `/`, `/ai-tools`, `/pricing`, `/boards-curriculums`, `/contact`, `/privacy`, `/terms`, and `/refund`.
- Add `noindex,nofollow` metadata to private/auth pages: `/login`, `/signup`, `/reset-password`, `/auth/*`, `/dashboard/*`, and `/admin/*`.
- Do not rely only on `robots.txt` for private pages. `Robots.txt` blocks crawling, but blocked URLs can still appear in search results if discovered externally.
- Block or `noindex` `/quiz/*` because current quiz pages are mock/prototype public routes and are not in the sitemap.
- Make sitemap `lastmod` stable. Do not use `new Date()` on every request; use real content update dates, build date, or omit `lastmod` until accurate.
- Submit the sitemap in Google Search Console and Bing Webmaster Tools after deployment.

Medium Priority Changes Left

- Shorten the homepage title. Current title is about 84 characters; target a tighter, more click-friendly title around 50-60 characters.

- Improve thin meta descriptions on /pricing, /boards-curriculums, and /ai-tools. Add clearer benefits and primary keywords.
- Add page-specific Open Graph titles/descriptions/images for /ai-tools, /pricing, /boards-curriculums, and legal pages instead of relying mostly on global defaults.
- Add Organization and WebSite structured data on the homepage, including SearchAction only if site search exists.
- Add BreadcrumbList structured data to public marketing pages.
- Add FAQPage structured data to /pricing and /boards-curriculums if their visible FAQs remain on-page.
- Create real SEO landing pages for high-intent keywords currently redirected to /signup, or use permanent redirects only where there is a true equivalent page.
- Review all redirect-only keyword URLs in next.config.mjs. Temporary redirects to signup do not build useful search landing pages.
- Add stronger internal links between homepage, AI tools, pricing, board/curriculum page, and each generator page using descriptive anchor text.

Low Priority / Growth SEO Changes Left

- Create content pages for high-intent teacher searches: lesson plan format, worksheet examples, NCERT lesson plans, JKBOSE resources, Hindi lesson plans, activity ideas, and presentation examples.
- Add schema where relevant: Product/Offer for pricing, SoftwareApplication/WebApplication for the app, and Article/HowTo only for real editorial pages.
- Add hreflang only when dedicated Hindi or regional-language pages exist.
- Run Lighthouse/PageSpeed after deployment and fix Core Web Vitals issues, especially hero image weight and LCP.
- Use descriptive image filenames and compressed modern formats where possible; Next Image helps, but source asset size still matters.
- Add an llms.txt or AI-crawler guidance file only as an optional AI-discovery enhancement, not a replacement for normal SEO.
- Set up ongoing monitoring: Search Console coverage, sitemap fetch status, indexed pages, crawl errors, and top queries.

Page-Level Notes

Homepage /	Good H1 and description. Needs shorter title, self-canonical, Organization/WebSite schema, and stronger keyword targeting.
/ai-tools	Good indexable page. Needs self-canonical, richer title/description, page-specific OG metadata, and structured data.
/pricing	Good page exists. Description is too short; add self-canonical, Product/Offer schema, and FAQ schema if FAQs remain visible.
/boards-curriculums	Good topic page. Needs stronger description, self-canonical, FAQ schema, and more indexable board/class/textbook content.
Generator pages	Strongest SEO implementation. Keep them in sitemap; continue adding unique FAQ/content blocks per generator.

Legal pages	Fine to keep indexable. Add self-canonicals and page-specific OG metadata.
Auth/private pages	Must be noindexed. Robots.txt alone is not enough for index control.
/lesson-plan	Redirects to /lesson-plan-generator. Remove from sitemap or replace with a permanent redirect strategy.

Recommended Implementation Order

- 1. Fix sitemap: remove redirect URL and stabilize lastmod.
- 2. Add self-canonical metadata to all public pages.
- 3. Add noindex metadata to auth, dashboard, admin, reset, and mock quiz pages.
- 4. Improve homepage, pricing, AI tools, and boards metadata copy.
- 5. Add homepage Organization/WebSite schema and breadcrumbs.
- 6. Submit sitemap in Search Console and Bing Webmaster Tools.
- 7. Build dedicated SEO landing/content pages for the redirected keyword routes.

Reference Standard Used

- Google Search Central SEO Starter Guide: titles, descriptions, crawlable content, structured data, and search-friendly site structure.
- Google Search Central sitemap guidance: sitemap should contain canonical URLs that matter for crawling.
- Google Search technical requirements: robots.txt controls crawling, but noindex/canonical controls indexing signals more directly.

End of report.
